FKM **NLS** EMERGENCY FISHPLATE SYSTEM

The FKM emergency fishplate system can be used to join all common rail profiles in the event of rail breaks, weld breaks, or at transition welds.

With the aid of adapter plates, a single fishplate can be used for all rail profiles and transition welds. The special shape of the fishplate ensures that two clamps can always be installed.

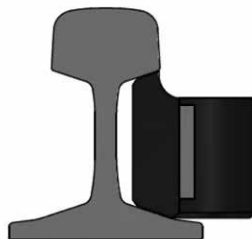

OUR RECOMMENDATION

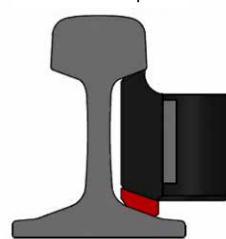

Due to the high weight of the NLS, we developed our **LRW-A** transport trolley.
