HSM-PRO-W

RAIL HEAD PROFILE GRINDING MACHINE NEW VERSION WITH ANGLE DRIVE FOR SIMULTANEOUS RAIL DEBURRING

The popular profile head grinding machine for all typical rail profiles with torsionally rigid frame and powerful 4-stroke engine has now been upgraded: our new HSM-Pro-W. It is expandable with an angle drive, allowing the area of the running edges to be ground even without an additional deburring machine. The cup wheel can be swapped with an angle drive in just a few simple steps. No additional engine or cumbersome modifications required.

OPTIONS

- > Stainless steel shelf for tools and accessories
- > Additional weights for higher grinding performance (2 x 14 kg)
- > LED spotlight
- > Ribbed extension arm
- > Aluminum toolbox

TECHNICAL DATA

Length/width/height	2100/1200/900 mm
Transport length	1510 mm
Gauge	from 900 mm to 1450 mm
Cup wheel size	up to Ø 150 mm
Deburring disks	up to Ø 250 mm
Weight with aluminum wheels	131 kg
Engine	Honda GXV 390
Power	7,6 kW

Less space required for easy transport and storage

Lower weight for transport to the work site

Easier and faster modification

Lower maintenance requirements
